

Assignment Template creator

This is a Command Line Interface (CLI) created using python. Using this you can create all necessary files for writing your assignment report.

I created this because, i am not getting ready with latex to create PDF, so i think of an alternative. What about creating PDF from our favourite markdown language!!

Pre-requisites

1. VScode should be installed
2. You have to install an extension in VScode -> **Markdown PDF**
3. (*optional*) It is better to install **Markdown All in One** extension also, This helps to edit markdown files easily.

Installation

```
pip install fire
git clone https://github.com/rawho/assBOT.git
cd assBOT
```

Usage

```
python assbot.py create hello
```

This Will create a folder hello for you, Lets take a look at the folder

```
hello
|--cet-logo.jpeg
|--demo.png
|--hello.md
```

In the `hello.md` file you can see a template will be created, There you can change the name, heading, etc..

`demo.png` and `cet-logo.jpeg` are the images used, you can add new images to this folder and add it in the markdown file

Convert to PDF

- Open the `hello.md` file in VScode
- `ctl + shift + p` and search **export**, then select **Markdown PDF: Export (pdf)**

Then Wait for few seconds and you can see a new pdf file is created in the same folder.
